

## Client outcomes

Partnership approach - report available to participating organisations.

This report demonstrates the Standard Client Outcomes Reporting (SCORE) assessments being reported by organisations. It shows the average shift between the earliest and latest SCORE assessments, and how client outcomes fluctuate over time, between program activities and across outlets.

### Unique features:

This report as a whole provides a unique view of the outcomes assessments recorded for clients.

### Key questions:

- How many of our clients have had outcomes assessments? How many of our clients have had a partial assessment?
- Which SCORE domains have been used to assess clients? Are they the most appropriate for the program(s) we're delivering?
- Is there a difference in client outcomes
  - between activities?
  - between outlets?
  - over different reporting periods?
  - between different client cohorts / demographics?

What does this tell us? Could these insights lead to changing the way we deliver our service?
- What do the percentages of positive, neutral and negative outcomes assessment tell us? Are there dips or peaks? Is this pattern expected for these clients?
- If you are 'translating' your client outcomes assessments from another tool into SCORE, does this report provide us with a new perspective on trends or patterns within our client group?

### Main filters (see filter page):

- Client Type: Individual client or support person
- Delivery organisation
- Outlets
- Program
- Program activity
- Reporting period
